

**Important Notice to
Gasoline Dispensing Facility Owners/Operators,
Contractors and Parts Houses
Regarding the
Healy Model 900 EVR Nozzle**

The California Air Resource Board (ARB) has determined that most Healy Model 900 EVR nozzles manufactured in 2007 are not as the nozzles were certified by the ARB for this system; therefore, Franklin Fueling Systems is in violation of State regulations. California Health & Safety Code (H&SC) §41954(f) prohibits the sale and installation of uncertified equipment; the replacement of one part in the Healy Model 900 EVR nozzle in 2007 made those nozzles uncertified. Franklin Fueling Systems has agreed to replace this part in all 2007 Model 900 nozzles in the state by April 15, 2008.

Due to this issue, any new Healy nozzles installed at any station (whether new or existing) in Ventura County must be model year 2006 or 2008 nozzles, or a Healy rebuilt 2007 nozzle. Selling or installing an uncertified 2007 nozzle is a violation of H&SC §41954(f). The model year is contained in the nozzle serial number, located on the bottom of the handgrip of the nozzle, as follows: XX YY Z, where YY indicates the model year (06, 07, 08).

Gasoline dispensing facility owners/operators are recommended to contact their distributor, to let them know of any 2007 model year nozzles at the facility, and await parts replacement by Franklin Fueling Systems.

Should you have any questions, please contact Ventura County APCD Air Quality Inspector Eric Wetherbee at 806/645-1496.
