

Ventura County  
Air Pollution  
Control District

**Air Toxics "Hot Spots" Information and Assessment Act of 1987**

**2016 ANNUAL REPORT**

Prepared By: Air Toxics Section  
Engineering Division

## **I. Introduction**

The Air Toxics "Hot Spots" Information and Assessment Act (the "Hot Spots" Act) was originally adopted in September 1987. Several additions and modifications to the "Hot Spots" Act have been adopted since 1987. This report describes the "Hot Spots" program as it is currently being implemented.

The primary purpose of the "Hot Spots" Act is to notify the public of facilities that have routine and predictable emissions of toxic air pollutants that may pose a significant health risk to nearby residents and workers. The Act also encourages those facilities to reduce the health risk below the level of significance.

## **II. Ventura County APCD "Hot Spots" Program**

The District's "Hot Spots" program consists of several steps. The first step is to identify facilities that may have routine and predictable emissions of toxic air pollutants. Since adoption of the "Hot Spots" Act in 1987, several methods have been used to select the facilities subject to the program. Initially, facilities with emissions of more than 10 tons per year of the pollutants traditionally regulated by the District - organic gases, nitrogen oxides, sulfur oxides, and particulate matter - were subject to the "Hot Spots" program. Later, other facilities were included in the program based on specific processes used at the facility (e.g., chrome plating), the amounts of specific compounds emitted at the facility (e.g., >1000 pounds per year of styrene), or the Standard Industrial Classification (SIC) Code of the facility (e.g., 5511 - auto body shops). Finally, facilities that are not specifically listed above, but are identified by the District as posing concern to public health, are being included. On an annual basis, the District is reviewing all facilities that are not otherwise subject to "Hot Spots" to determine if any should be included in the "Hot Spots" program.

These facilities are then required to prepare emission inventories using criteria and guidelines that have been developed by the California Air Resources Board. The completed emission inventories are reviewed and approved by District staff. Every four years, District staff review information submitted by each facility to determine if the emission inventory should be updated.

When an emission inventory is completed, District staff analyzes the information and prioritize the facilities as having a high, intermediate, or low probability of causing a health risk. During the prioritization analysis, a numerical score is calculated for each facility based on the amount of emissions from the facility, the toxic potency of the emitted compounds, and the distance from the emission point to a receptor. Additionally, for a facility that completed a health risk assessment based on an earlier inventory, the results of the previous health risk assessment may be used in determining the priority for the facility.

High priority facilities are required to prepare a health risk assessment. Intermediate priority facilities are exempt from further program requirements until the next four-year cycle begins. Low priority facilities are exempt from any further requirements unless new information becomes available that suggests the need to re-evaluate a facility.

In February 2015, OEHHA adopted updated guidelines that the District is required to use for preparing "Hot Spots" health risk assessments. The guidelines were updated in response to the Children's Environmental Health Protection Act of 1999 (H&SC 39606) which required that infants and children be explicitly considered in assessing air toxics risks. Under the updated

guidelines, calculated cancer risks may be substantially higher than under the old guidelines. This will likely result in additional health risk assessments being required from facilities. Additional public notification and risk reduction could be required as a result.

On November 8, 2016, the procedure used by the District to prioritize facilities was updated to implement the new OEHHA guidelines.

Appendix A lists the facilities that are currently in the “Hot Spots” program and the current priority for each facility.

The high priority facilities must prepare the health risk assessments according to methods developed by the state Office of Environmental Health Hazard Assessment (OEHHA). The health risk assessments are reviewed and approved by both District staff and OEHHA staff.

If the health risk assessment indicates that the facility may pose a significant health risk, the facility must notify the affected public of the risk. If the health risk assessment indicates that the facility does not pose a significant health risk, the facility does not need to take any further action. The information may be used to re-prioritize the facility to reduce the future program requirements.

For Ventura County, a significant health risk for purposes of providing public notice under the “Hot Spots” program has been defined as a lifetime excess cancer risk of greater than or equal to 10 in a million or an acute or chronic noncancer total hazard index exceeding 1.

Appendix B lists the results of all health risk assessments that have been submitted to the District to date.

When public notice is required, the District prepares a letter describing the risk for distribution to affected residents and businesses. The facility may also prepare a letter of its own to include in the notification. Upon request of the letter recipients, the District and the facility will hold a public meeting to respond to public concerns.

Finally, facilities that may pose a significant health risk to nearby residents or workers are required to develop and implement a plan to reduce the health risk below the level of significance. All of the facilities in Ventura County that have been determined to create a significant risk through the “Hot Spots” program have reduced the risks to below the significant risk level.

Appendix C lists the facilities that have been found to have a significant potential health risk. All the facilities on the list have provided public notice. In addition, Appendix C describes the actions taken by these significant risk facilities to reduce their risks.

### **III. Industrywide Facilities**

In addition to the procedures described above that apply to individual facilities, the District staff is responsible for analyzing the potential health risk posed by certain classes of smaller facilities that are called “industrywide” facilities. Facilities that are included in industrywide assessments by the District are autobody shops, retail gasoline stations, dry cleaners using perchloroethylene, furniture strippers using methylene chloride, and gasoline bulk plants.

Statewide efforts have been completed to develop guidelines for preparing industrywide air toxics inventories and health risk assessments for autobody shops (completed September 1996) and retail gasoline stations (completed December 1997). The information in the gasoline station guidelines can be applied to gasoline bulk plants. The guidelines for dry cleaners are essentially complete. Using the draft industrywide guidelines for dry cleaners indicated that many perchloroethylene drycleaning facilities could be significant risk, statewide and in Ventura County. On October 14, 1993, the California Air Resources Board adopted an Air Toxics Control Measure (ATCM) to reduce emissions of perchloroethylene from dry cleaning operations. On January 25, 2007, the ATCM was amended to phase out the use of perchloroethylene in drycleaning entirely by January 1, 2023. There are 13 drycleaners in the industrywide group. No statewide guidelines are being prepared for methylene chloride furniture stripping because of the relatively small number of facilities (3 in Ventura County). The District will have to develop the methodology for performing the industrywide assessment for furniture strippers.

Industrywide facilities are prioritized in a manner similar to that used for other facilities, using the statewide guidelines. The District has been prioritizing autobody shops, gasoline stations, and gasoline bulk plants using these guidelines. These types of facilities can potentially cause significant risk. So far, all 115 autobody shops and all 179 gas stations have been determined to be low or intermediate priority. All 11 gasoline bulk plants have been determined to be low or intermediate priority. Screening of drycleaners is in progress. So far, using the draft guidelines, only 2 of 13 drycleaners have been determined to be low or intermediate priority. Continued screening of drycleaners is in progress. One reason many autobody shops, gasoline stations, and gasoline bulk plants in Ventura County are less than high priority is due to existing District rules. APCD Rule 74.18 requires most automotive painting to be performed in a paint spray booth, requires high transfer efficiency coating application methods to be used, and prohibits use of coatings containing lead or hexavalent chromium from being applied outside a spray booth. Under the California Air Resources Board Air Toxic Control Measure (ATCM) for Emissions of Hexavalent Chromium and Cadmium from Motor Vehicle and Mobile Equipment Coatings, the use of coatings containing hexavalent chromium or cadmium for automotive painting has been prohibited as of December 31, 2003. APCD Rule 70 requires gasoline stations to use Phase I and Phase II vapor recovery systems and requires that vent pipes on gasoline tanks to be equipped with pressure vacuum valves. Rule 70 also requires gasoline bulk plants to use CARB certified vapor recovery systems.

The industrywide guidelines documents and corresponding risk assessments will be updated as needed to implement the new OEHHA health risk assessment guidelines.

Appendix D is a list of industrywide sources and indicates which facilities have been determined to be less than significant risk.

#### **IV. Air Toxics Rules**

No specific rules to control emissions of air toxics have been adopted by the District based on the Air Toxics "Hot Spots" data.

The California Air Resources Board uses the Air Toxics "Hot Spots" data in developing air toxic control measures (ATCM) under the Toxic Air Contaminant Identification and Control Program. The US Environmental Protection Agency is also using the toxics emission data in developing

Maximum Achievable Control Technology (MACT) standards under Title III of the 1990 Clean Air Act Amendments.

The California Air Resources Board has adopted on several ATCMs to control emissions of diesel engine exhaust particulate matter. Data gathered under the "Hot Spots" program was used in the development of the ATCM for stationary diesel engines, which was finalized December 18, 2004. The Air Toxics "Hot Spots" Emission Inventory Criteria and Guidelines Report has been revised to include more diesel engines in the "Hot Spots" program. The additional diesel engines will be included in the "Hot Spots" program after the ATCM is fully implemented.

Additionally, the California Air Resources Board has revised the ATCM for dry cleaners using perchloroethylene. The revisions are aimed at reducing risks, which have been found to be potentially significant for some facilities under the current ATCM. Under the revised ATCM, new dry cleaners cannot use perchloroethylene and existing facilities must discontinue its use by 2023 or earlier.

The District is required under state law to implement and enforce both state ATCM and federal MACT standards.

# Health Risk Assessment Priorities for Facilities Currently in the Air Toxics "Hot Spots" Program (AB 2588)

| Fac # | Facilty Name | Location | Area | Year | Cancer Risk | Chronic HI | Acute HI |
|-------|--------------|----------|------|------|-------------|------------|----------|
|-------|--------------|----------|------|------|-------------|------------|----------|

Cancer Risk is expressed as lifetime excess cancer risk in chances per million.

HI is the hazard index, which is the ratio of the concentration to the reference exposure level.

Approved health risk assessments have been approved by the District. These results were reviewed by the Cal EPA Office of Environmental Health Hazard Assessment, as applicable.

Results for Health Risk Assessments that are under review are based on results submitted by the facility operator and have not been approved by the District.

# Air Toxics “Hot Spots” Program (AB 2588) Risk Reductions by Significant Risk Facilities

| Fac # | Facility Name  | Location                | Area   | Year | Cancer Risk | Chronic HI | Acute HI |
|-------|--|-------------------------|--------|------|-------------|------------|----------|
| 01169 | Coastal Multichrome, Inc.<br>Public Notice completed.<br>Risk is from hexavalent chromium from plating. The plating equipment was replaced and relocated to 1160 Mercantile Street. Source testing demonstrating that emissions have been reduced to below the significance level has been completed. Facility ceased chrome plating in 2014.  | 1100 Mercantile Street  | Oxnard | 1999 | 60          | 0.2        | 0        |
| 01169 | Coastal Multichrome, Inc.<br>Public Notice completed.<br>Risk is from hexavalent chromium from plating. The plating equipment was replaced and relocated. Source testing demonstrating that emissions have been reduced to below the significance level has been completed. . Facility ceased chrome plating in 2014.  | 1100 Mercantile Street  | Oxnard | 1995 | 54          | 0.2        | 0        |
| 01169 | Coastal Multichrome, Inc.<br>Public Notice completed.<br>Risk was driven by perchloroethylene degreasing solvent and hexavalent chromium from plating. Use of perchloroethylene has been eliminated. The plating equipment was replaced and relocated. Source testing demonstrating that emissions have been reduced to below the significance level has been completed. . Facility ceased chrome plating in 2014.     | 1100 Mercantile Street  | Oxnard | 1991 | 133         | 0.6        | 0.4      |
| 00129 | GE Plastics<br>Public Notice completed. Community meeting held.<br>Risk was driven by acrylonitrile emissions from resin transfer. Facility has reduced use of resin. Permit to Operate revised to require risk reduction measures prior to any future increase in resin use. 1999 health risk assessment shows risk is now below significant level. Facility shut down in 2002.                                       | 1000 Factory Lane       | Oxnard | 1991 | 99          | 0.3        | 0        |
| 01137 | Oxnard Wastewater Plant<br>Public Notice completed.<br>Risk driven by acrolein from gas fired engines, and chlorine and ammonia from the headworks. Some gas fired engines have been removed or placed on standby status and replaced with electric motors. Headworks odor control system chemical use changed to eliminate chlorine emissions. 1996 health risk assessment shows risk is now below significant level. | 6001 South Perkins Road | Oxnard | 1992 | 7           | 0.7        | 2        |
| 01137 | Oxnard Wastewater Plant<br>Public Notice completed.<br>Risk driven by acrolein and formaldehyde from gas fired engines, and hydrogen sulfide from the headworks. Reconfigured stacks on the engines to improve dispersion and reduce risk to below significance level.   | 6001 South Perkins Road | Oxnard | 1990 | 8           | 0.8        | 1        |
